What Is a Ledger?

The ledger is the principal book of accounts where all the financial transactions are summarized and categorized into various accounts. It provides a comprehensive view of the financial position of a business by consolidating data from subsidiary books like the cash book, sales book, purchase book, etc.

Ledger Accounts and Their Significance

Each account within the ledger is known as a ledger account or T-account. These accounts help in:

- Classifying transactions by nature (assets, liabilities, income, expenses).
- Showing the cumulative effect of transactions over a period.
- Facilitating the preparation of trial balances, income statements, and balance sheets.

Link Between Cash Book and Ledger Accounts

The cash book acts as a subsidiary book that feeds data into the ledger. All cash transactions recorded in the cash book are posted to respective ledger accounts, such as:

- Bank Account: Records bank deposits and withdrawals.
- Other Accounts: Expenses, revenues, or asset accounts affected by cash transactions.

This linkage ensures that the financial records are both detailed and consolidated, enabling accurate financial analysis.

- Debiting the cash account for cash received.
- Crediting the cash account for cash paid.
- Similarly, transactions affecting bank accounts are posted accordingly.
