Sample Question and Answer Breakdown

To illustrate, consider a typical question in a virtual clinical excursion:

Question:

A 65-year-old male presents with chest pain radiating to his left arm. His vital signs are blood pressure 150/90 mmHg, pulse 88 bpm, and respiratory rate 20 breaths per minute. Based on this scenario, outline your initial assessment and management plan.

Sample Answer:

- Initial Assessment:
 - Conduct rapid primary survey focusing on airway, breathing, circulation (ABC).
 - Obtain detailed history of chest pain onset, duration, character, and associated symptoms.
 - Perform physical examination, including auscultation for heart sounds, palpation, and inspection.
 - Measure vital signs comprehensively.
 - Initiate continuous ECG monitoring and oxygen saturation assessment.
- Management Plan:
 - Ensure the patient's safety and comfort.
 - Administer oxygen if hypoxic.
 - Prepare for possible administration of nitroglycerin under protocol.
 - Establish IV access.

- Notify the cardiology team and prepare for possible further interventions (e.g., angiography).
- Initiate pain relief measures and monitor vital signs closely.

Rationale:

Early assessment and management of chest pain are critical to prevent myocardial infarction progression. The plan aligns with ACLS protocols and best practices.

Scoring Rubric:

- Complete assessment with appropriate prioritization: 4 points
- Correct management steps: 4 points
