Key Geometric Terms and Definitions

Understanding symbols alone isn't sufficient; grasping the terminology is crucial for interpreting geometric concepts accurately. Here, we explore essential geometric terms, their definitions, and their significance.

Points, Lines, and Planes

Point:

- The most fundamental element; has no size, shape, or dimension.
- Represents a location in space, labeled with a capital letter (e.g., A, B, C).

Line:

- Extends infinitely in both directions; has length but no thickness.
- Defined by any two points lying on it (e.g., line AB).

Plane:

- A flat surface extending infinitely in all directions; has length and width but no thickness.
- Often represented by a parallelogram or a four-point figure (e.g., plane ABCD).

Segments, Rays, and Angles

Segment (Line Segment):

- The part of a line bounded by two endpoints, including all points between.
- Denoted as AB.
