Sample Osler Board Review General Surgery Question

Question: A 65-year-old man presents with a sudden onset of severe abdominal pain, hypotension, and tachycardia. On examination, his abdomen is distended and tender with signs of peritonitis. An upright abdominal X-ray shows free air under the diaphragm. What is the most appropriate initial management?

Options:

- Initiate broad-spectrum antibiotics and observe.
- Perform emergent laparotomy.
- Place a nasogastric tube and monitor.
- Order a CT scan for further evaluation.
- Start IV fluids and schedule elective surgery.

Answer: 2. Perform emergent laparotomy.
