Major Climate Zones

The world's climate can be categorized into several major zones:

- **Tropical Climate:** Characterized by high temperatures and significant rainfall, found near the equator.
- **Arid and Semi-Arid Climate:** Deserts and steppes with low precipitation.
- **Temperate Climate:** Moderate temperatures with distinct seasons.
- **Cold Climate:** Found in polar regions with long, harsh winters.
- **Mountain Climate:** Varies significantly with elevation, often cooler and wetter.

Climate Variability and Change

Climate variability refers to natural fluctuations in climate patterns over short periods, while climate change involves long-term alterations primarily driven by human activities like greenhouse gas emissions. Key indicators of climate change include rising global temperatures, shrinking ice caps, rising sea levels, and more frequent extreme weather events.
