- Vibrometer

A: 1. Thermocouple**Short Answer Question Example**

Q: Explain the working principle of a vernier caliper.

A: A vernier caliper works on the principle of sliding measurement. It consists of a main scale and a sliding vernier scale. When the jaws are closed or opened to measure an object, the main scale provides the main reading, and the vernier scale provides fractional readings, usually to 0.02 mm precision. The user aligns the zero mark of the vernier scale with the main scale and reads the measurement by noting the aligned marks on both scales.

Numerical Problem Example

Q: A micrometer screw gauge has a least count of 0.01 mm. If the instrument reads 15.23 mm, and a correction of 0.02 mm is to be applied, what is the true measurement?

A: True measurement = 15.23 mm + 0.02 mm = 15.25 mm
