A hazard is any source of potential harm or adverse health effect on a person. In occupational health and safety, identifying hazards is a crucial first step toward managing risks. Recognizing hazards enables organizations to implement appropriate controls, thereby preventing accidents and health issues. For example, exposed electrical wiring in a factory can pose an electric shock risk, which needs to be mitigated through proper insulation and maintenance.

Q2: Describe the hierarchy of controls and provide examples of each level.

Model Answer:

The hierarchy of controls is a systematic approach to minimize or eliminate workplace hazards, listed from most to least effective:

- Elimination: Remove the hazard entirely. Example: Replacing a hazardous chemical with a safer alternative.
- Substitution: Replace the hazard with a less harmful one. Example: Using water-based paints instead of solvent-based.
- Engineering Controls: Isolate people from the hazard. Example: Installing guards on machinery.
- Administrative Controls: Change work practices or policies. Example: Implementing safety training and shift rotations.
- PPE: Provide personal protective equipment. Example: Wearing helmets, gloves, or eye protection.

Applying this hierarchy ensures that the most effective measures are prioritized in risk management.

Q3: A factory has experienced frequent slips and trips. As a health and safety manager, outline your approach to addressing this issue.
