The chapter begins with an overview of the respiratory system's anatomy and physiology, setting the foundation for understanding various respiratory conditions and their treatments.

Key Concepts in Respiratory Anatomy and Physiology

Understanding the structure and function of the respiratory system is vital for effective clinical practice. The chapter emphasizes the following core concepts:

Respiratory System Anatomy

The respiratory system is composed of several structures that work together to facilitate gas exchange:

- **Nasal Cavity and Sinuses:** Warms, moistens, and filters incoming air.
- **Pharynx and Larynx:** Conducts air to the lower respiratory tract and houses the vocal cords.
- **Trachea and Bronchi:** Main airways that branch into smaller bronchi and bronchioles.
- **Lungs:** Contain alveoli where gas exchange occurs.
- **Diaphragm and Intercostal Muscles:** Facilitate breathing mechanics.

Physiology of Respiratory Function

Key physiological processes include:

- **Ventilation:** Movement of air into and out of the lungs.
- **Perfusion:** Blood flow through pulmonary capillaries.
- **Gas Exchange:** Oxygen diffuses into blood; carbon dioxide diffuses out.
- **Oxygen Transport:** Hemoglobin's role in carrying oxygen.

The chapter emphasizes the importance of understanding these processes to evaluate and manage respiratory function effectively.

Assessment and Monitoring in Respiratory Care

Accurate assessment is fundamental for diagnosing respiratory issues and tailoring treatment plans. The chapter discusses various assessment tools and techniques:
