How Do User Certificates Work on Nokia 114?

Understanding the technical operation of user certificates can seem complex, but at a fundamental level, they follow standard Public Key Infrastructure (PKI) principles.

- Certificate Issuance

Certificates are issued by a trusted Certificate Authority (CA). For consumer devices like Nokia 114, certificates might be pre-installed or provisioned during device setup.

- Public and Private Keys

Each certificate contains a public key, while the corresponding private key remains secure on the device. The private key is used for signing or decrypting data, while the public key is shared openly to verify signatures or encrypt messages.

- Authentication Process

When a user attempts to access a secure service:

- The device presents its certificate to the server.
- The server verifies the certificate's validity, including checking its digital signature and expiration date.
- If valid, the server grants access, often establishing an encrypted session via protocols like SSL/TLS.

- Certificate Storage

On Nokia 114 devices, certificates are stored securely, typically within the device's integrated security module or a dedicated secure element, preventing unauthorized access or extraction.

Practical Management of User Certificates on Nokia 114
