- Connecting to the Vehicle's On-Board Diagnostics (OBD) Port: Using specialized equipment to communicate with the vehicle's immobilizer system.
- Using a Key Programming Device: Such as Toyota Techstream or aftermarket key programmers.
- Synchronizing the Key or Fob: Coding the new key to the vehicle's security system.
- Testing Functionality: Ensuring that the key can lock/unlock doors, start the engine, and operate other remote features.

Security Measures and Immobilizer Systems

Modern Camrys are equipped with immobilizer systems that prevent unauthorized starting. During programming:

- The system verifies the authenticity of the key's transponder or chip.
- The vehicle's ECU (Engine Control Unit) is updated with the new key's data.
- Multiple keys can often be programmed simultaneously, depending on the model.

DIY vs. Professional Key Programming

DIY Key Programming

Some older or simpler keys can be programmed at home using specific procedures:

- For Transponder Keys: Some models allow self-programming by following specific steps involving ignition cycles.
