Typical ATI Pain Management Questions and Answers

Below are representative questions that reflect the style and content of ATI assessments, along with detailed explanations.

Question 1: Which assessment finding indicates effective pain management in a postoperative patient?

- a) The patient reports a pain level of 8/10
- b) The patient reports pain relief after medication administration
- c) The patient refuses pain medication
- d) The patient's vital signs are stable

Answer: b) The patient reports pain relief after medication administration

Explanation: Effective pain management is evidenced by the patient's own report of decreased pain levels. While vital signs and patient comfort are important, subjective pain relief confirms that the intervention is working.

Question 2: A patient is prescribed opioids for severe pain. Which statement indicates a need for further teaching?

- a) "I will report any difficulty breathing immediately."
- b) "I can take the medication on an empty stomach for faster relief."
- c) "I will avoid alcohol while taking this medication."
- d) "I will ask my healthcare provider before taking any new medications."
