Common Types of Questions on the Form C Holt Geometry Test

Multiple-Choice Questions

These questions assess recognition and recall, often asking students to identify the correct statement or formula related to a geometric concept.

Example:

Which of the following is the correct measure of an exterior angle of a triangle?

- A) Sum of two interior angles
- B) The difference of two interior angles
- C) Equal to one interior angle
- D) Sum of the two remote interior angles

Answer: D

Short-Answer Questions

Require students to provide brief, precise responses, such as calculating an angle measure, proving a property, or providing a definition.

Example:

Calculate the length of the hypotenuse in a right triangle with legs measuring 3 cm and 4 cm.

Solution: Using the Pythagorean theorem: $c = \sqrt{3^2 + 4^2} = 5$ cm.

Problem-Solving and Extended Response Questions

These involve multi-step problems that test deeper understanding, application, and reasoning.

Example:

Given a parallelogram with sides measuring 8 cm and 6 cm, and an angle of 60° , find the area of the parallelogram.

Solution: Area = base $\times$ height. The height can be found using the side and the sine of the included angle:

$$\text{Height} = 6 \sin 60^\circ = 6 \times \frac{\sqrt{3}}{2} = 3\sqrt{3}$$

Area = $(8 \times 3\sqrt{3}) = 24\sqrt{3} \text{ cm}^2$.
