3. Multidetector Computed Tomography (MDCT)

While less common in routine dental practice, MDCT offers high-resolution imaging suitable for complex cases such as temporomandibular joint (TMJ) evaluation, trauma, and oncological assessment.

4. Magnetic Resonance Imaging (MRI)

MRI provides superior soft tissue contrast, crucial for:

- TMJ disc assessment
- Neural pathway visualization
- Soft tissue tumors
- Inflammatory conditions

The book discusses MRI sequences, patient positioning, and interpretation nuances.

5. Ultrasonography

Emerging as a useful adjunct, especially for superficial soft tissue lesions, lymph nodes, and vascular anomalies. The text covers:

- Technique optimization
- Limitations due to bone interference
- Clinical indications

6. Nuclear Imaging Techniques

Including positron emission tomography (PET) and scintigraphy, primarily utilized in oncologic cases to detect metastases or evaluate tumor activity.
