## Background: Setting the Stage for Disaster

### The Context of 1952: A Winter Storm of Unprecedented Power

The story begins in the early hours of February 18, 1952, when a fierce nor'easter swept across the Atlantic, bringing with it hurricane-force winds and record-breaking waves. The storm's intensity was compounded by freezing temperatures, creating treacherous conditions for any vessels caught at sea. The Atlantic coastline near Chatham, Massachusetts, was particularly vulnerable, with the storm breaching defenses and battering the shoreline.

### The S.S. Pendleton and the Tanker Tragedy

Central to the narrative is the S.S. Pendleton, a 603-foot oil tanker navigating through the storm. As the vessel approached Chatham Harbor, it lost control amidst the violent seas. The ship was carrying a cargo of gasoline and other flammable materials, heightening the urgency of rescue efforts. The tanker's steering gear failed, and it was driven aground on the treacherous Outer Bar, creating an imminent threat of explosion and environmental disaster.

### The Coast Guard's Immediate Response

The United States Coast Guard, tasked with maritime safety, swiftly mobilized its rescue units. The Coast Guard's rescue efforts during this period were already renowned, but the storm posed unprecedented challenges. The decision to undertake a rescue was driven by the risk of an oil spill, fire, and loss of life. The storm's ferocity made standard rescue operations impossible, necessitating innovative tactics and extraordinary bravery.

## Core Components of an IPAF-Recommended Rescue Plan

A comprehensive rescue plan, as per IPAF guidance, encompasses several critical elements:

## 1. Risk Assessment and Planning

Before starting work, conduct a detailed risk assessment to identify potential rescue scenarios, considering:

- Types of AWP's used
- Work environment and terrain
- Potential hazards (e.g., electrical, environmental)
- Operator experience and training levels
- Site-specific constraints

Based on this, develop tailored rescue procedures addressing identified risks.

## 2. Designation of Rescue Roles and Responsibilities

Define clear roles for all personnel involved:

- Rescue Supervisor: Oversees the rescue operation, coordinates efforts.
- Rescue Team Members: Execute rescue procedures; must be trained and competent.
- Operator Involved: Provides information on the incident and the condition of the casualty.
- Additional Support Staff: As needed (e.g., first aid, emergency services).

Ensure everyone understands their responsibilities and is trained accordingly.

## 3. Equipment and Tools for Rescue

Identify and maintain appropriate rescue equipment, such as:

- Rescue harnesses, slings, and lanyards
- Portable rescue cradles or stretchers
- Extra control or lowering devices
- Communication devices (e.g., radios)
- Personal protective equipment (PPE)

Regular inspection and maintenance of rescue tools are imperative to ensure readiness.

## 4. Rescue Procedures and Techniques

Develop step-by-step procedures tailored to different scenarios:

- Emergency lowering: Lowering the platform to a safe position.
- Operator rescue: Safe retrieval of the operator using harnesses or rescue baskets.
- Medical emergencies: Providing first aid or calling emergency services.

Procedures should consider:

- The type of equipment involved
- The position of the platform (e.g., at height, tilted)
- Accessibility of the rescue location
- Potential hazards during rescue

## 5. Communication Protocols

Effective communication is crucial during rescue. Establish protocols such as:

- Use of radios or signaling devices
- Clear command hierarchy
- Emergency signals and procedures
- Documentation of communication during rescue

## 6. Training and Drills

Regular training ensures rescue teams are familiar with procedures and equipment. Conduct drills at least annually, covering:

- Simulated rescue scenarios
- Equipment handling
