- Facilitate international trade by reducing technical barriers

The IEC aims to provide a common language for manufacturers, regulators, and consumers, ensuring that products and systems meet consistent requirements regardless of origin.

Structure and Governance of the IEC

Organizational Framework

The IEC operates through a well-defined organizational structure that includes:

- Member National Committees (MNCs): Each country's national standards body (e.g., ANSI in the USA, BSI in the UK) acts as its MNC, representing local interests and submitting proposals.
- Technical Committees (TCs): These are specialized groups focusing on specific sectors or technologies, such as power systems, electronics, or renewable energy.
- Subcommittees (SCs): Focused groups within TCs that handle detailed technical work.
- Working Groups (WGs): Smaller teams tasked with drafting, reviewing, and revising standards.

This layered structure ensures that standards are developed through a broad consensus involving industry, academia, government, and consumers.

Decision-Making Process

IEC standards are developed via a consensus-driven process:

- Proposal Submission: A member submits a proposal for a new standard or revision.
- Working Draft Development: WGs create initial drafts, often through collaborative online platforms.
- Committee Draft (CD): Drafts are reviewed and revised by all members.
- Draft for Comment (FCD): Distributed widely for public review and feedback.
- Final Draft International Standard (FDIS): Incorporates feedback and is prepared for approval.
- Publication: Upon approval, the standard is published and becomes an official IEC standard.

This rigorous process ensures technical accuracy, relevance, and broad acceptance.
