Setting Up the Fox Float RL Propedal Rear Shock: A Step-by-Step Guide

Proper setup is crucial for harnessing the full potential of your Fox Float RL Propedal Rear Shock. Here's a comprehensive walkthrough:

Step 1: Determine Your Sag

Sag is the amount of shock travel used when you sit on the bike in your riding position. Proper sag ensures optimal traction and comfort.

- Tools Needed: Ride your bike in a safe, flat area.
- Procedure:
 - Mark the shock's extended length.
 - Sit on the bike with gear, in riding position.
 - Have a friend or use a mirror to measure the shock's compressed length.
 - Typical sag for mountain biking is about 20-30% of the shock's total travel.

Step 2: Adjust Air Pressure

Based on your sag measurement:

- Release air from the Schrader valve.
- Add or release air using a shock pump until the desired sag is achieved.
- Recheck sag after adjustments.

Step 3: Set Rebound

Rebound controls how quickly the shock extends after compression.

- Start with the rebound knob set to the middle or recommended setting.
- Test ride and adjust:
 - Faster Rebound: For smoother terrain or smaller impacts.
 - Slower Rebound: For rougher terrain, to prevent excessive bouncing.

Step 4: Tune Propedal

Propedal adjustment helps balance pedaling efficiency and traction.

- Start with the dial set to the "Open" or lowest setting.
- Gradually increase to find a balance:
- Lower Setting: For rough trails needing more traction.
- Higher Setting: For climbing or smooth sections to reduce pedal bob.

Step 5: Use Remote Lockout

- Engage the lockout lever when riding on smooth surfaces or climbing.
- Release during descents or technical sections for full suspension travel.
