Obstetric ultrasound focuses on monitoring pregnancy progression, fetal development, and detecting potential issues early. It is typically performed at multiple stages during pregnancy, including the first trimester, second trimester, and late pregnancy.

Gynaecological Ultrasound

Gynaecological ultrasound examines the ovaries, uterus, fallopian tubes, and other pelvic structures. It helps diagnose conditions such as ovarian cysts, fibroids, endometriosis, and other abnormalities affecting the female reproductive system.

Types of Ultrasound Techniques in Obstetrics and Gynaecology

Understanding the different ultrasound techniques can help patients and practitioners choose the right method for specific needs.

Transabdominal Ultrasound

This is the most common type, where a transducer is placed on the abdomen after applying a gel. It provides a broad view of the pelvis and is often used in later stages of pregnancy.

Transvaginal Ultrasound

A specialized probe is inserted into the vagina, offering higher resolution images of the uterus and ovaries, especially during early pregnancy or when detailed pelvic assessment is needed.

3D and 4D Ultrasound

These advanced imaging techniques provide three-dimensional images and real-time video of the fetus, allowing for detailed visualization of fetal anatomy and movements.

Preparing for an Obstetric or Gynaecological Ultrasound

Proper preparation ensures clear images and accurate results. Here are some general guidelines.

For Obstetric Ultrasound

- Follow your healthcare provider's instructions regarding water intake, especially for early pregnancy scans.
- Wear comfortable clothing that can be easily adjusted or moved aside for abdominal scans.

- It's often recommended to have an empty bladder before the scan to improve pelvic visualization.
- Wear loose, comfortable clothing for easy access to your pelvic area.
- Inform your healthcare provider about your menstrual cycle or any recent medications, as these can influence the results.

What to Expect During an Ultrasound Procedure

Knowing what happens during an ultrasound can make the experience less stressful.

During an Obstetric Ultrasound

- The technician or sonographer will apply gel to your abdomen or insert the transducer vaginally.
- You may be asked to lie still and breathe normally.

- The procedure typically lasts 20-30 minutes.
