Sample Bio 101 Final Exam Questions and Answers

Below are sample questions often encountered on bio 101 finals, along with concise answers to guide your studying.

Question 1: What is the basic unit of life?

Answer: The cell is the basic unit of life. All living organisms are composed of cells, which carry out

essential functions necessary for survival.

Question 2: Describe the process of photosynthesis.

Answer: Photosynthesis is the process by which green plants, algae, and some bacteria convert light energy into chemical energy stored in glucose. It occurs primarily in the chloroplasts and involves the absorption of light by chlorophyll, carbon dioxide fixation, and water splitting, resulting in glucose and oxygen as byproducts.

Question 3: Explain Mendel's Law of Segregation.

Answer: Mendel's Law of Segregation states that during gamete formation, the two alleles for a gene separate so that each gamete carries only one allele for each gene. Offspring inherit one allele from each parent, contributing to genetic variation.

Question 4: What are the main differences between RNA and DNA?

Answer: DNA is double-stranded, contains deoxyribose sugar, and encodes genetic information. RNA is single-stranded, contains ribose sugar, and functions mainly in protein synthesis. DNA uses thymine, whereas RNA uses uracil.

Question 5: Describe the concept of natural selection.

Answer: Natural selection is the process where individuals with advantageous traits are more likely to survive and reproduce, passing those traits to offspring. Over time, this leads to evolutionary changes within populations.
