Mechanics

Mechanics forms the backbone of physics and involves studying the motion of objects, forces, and energy.

Newton's Laws of Motion

- **First Law (Law of Inertia):** An object remains at rest or in uniform motion unless acted upon by an external force.
- **Second Law:** The force acting on an object is equal to the mass of the object multiplied by its acceleration ($F = ma$).
- **Third Law:** For every action, there is an equal and opposite reaction.

Work, Energy, and Power

- **Work (W):** Done when a force causes displacement ($W = F \times d \times \cos\theta$).
- **Kinetic Energy (KE):** Energy possessed by a body due to its motion ($KE = \frac{1}{2}mv^2$).
- **Potential Energy (PE):** Energy stored due to position (e.g., gravitational $PE = mgh$).
- **Power:** Rate of doing work ($P = W / t$).

Law of Conservation of Energy

- Energy cannot be created or destroyed, only transformed from one form to another.

Electromagnetism

Electromagnetism explores electric and magnetic fields, forces, and their interactions.

Electrostatics

- **Coulomb's Law:** The force between two point charges is proportional to the product of their charges and inversely proportional to the square of the distance between them ($F = k \times q_1 \times q_2 / r^2$).
- **Electric Field:** The region around a charge where it exerts force on other charges ($E = F / q$).
- **Electric Potential and Potential Difference:** Work done in moving a charge in an electric field ($V = W / q$).

Magnetism

- **Magnetic Field:** Region where magnetic forces are experienced.
- **Biot-Savart Law:** Magnetic field due to a current element ($dB = \mu_0 / 4\pi \times (Idl \times r) / r^3$).
- **Electromagnetic Induction:** Changing magnetic flux induces an emf (Faraday's Law).

Electromagnetic Waves

- Generated by accelerating charges; travel at the speed of light.
- Include visible light, radio waves, X-rays, etc.
- Characteristics: wavelength, frequency, speed.

Thermodynamics

Thermodynamics deals with heat, work, temperature, and the laws governing energy transfer.

First Law of Thermodynamics

- Energy added to a system as heat equals the increase in internal energy plus work done by the system ($\Delta U = Q - W$).

Second Law of Thermodynamics

- Entropy of an isolated system always increases; heat flows naturally from hot to cold.

Heat Engines and Efficiency

- Devices convert heat into work; efficiency is the ratio of work output to heat input.
- Maximum efficiency is given by Carnot's theorem: $\eta = 1 - T_c / T_h$.

Optics

Optics involves the study of light behavior, reflection, refraction, and optical instruments.

Reflection and Refraction

- **Laws of Reflection:** Angle of incidence equals angle of reflection.
- **Snell's Law:** $n_1 \sin \theta_1 = n_2 \sin \theta_2$; relates angles and refractive indices.

Optical Instruments

- Uses lenses and mirrors for magnification and image formation.
- Examples: microscopes, telescopes, cameras.

Dispersion of Light

- Splitting of white light into its constituent colors using a prism.

Modern Physics

Modern physics introduces concepts beyond classical physics, including quantum mechanics and relativity.

Photoelectric Effect

- Light incident on a metal surface ejects electrons if the frequency exceeds a threshold.
- Supports particle nature of light; explained by Einstein using quanta of energy ($E = hf$).

Radioactivity

- Disintegration of unstable nuclei emitting alpha, beta, or gamma rays.
- Half-life: time taken for half the nuclei to decay.

Nuclear Physics

- Involves fission, fusion, and applications in energy generation.

Formulas and Constants to Remember

Having a quick reference to important formulas helps in solving problems efficiently.

- **Newton's Second Law:** $F = ma$
- **Work done:** $W = Fd \cos\theta$
- **Kinetic Energy:** $KE = \frac{1}{2} mv^2$
- **Potential Energy (gravitational):** $PE = mgh$
