Question 1: Describe the main layers of the Earth and their properties.

Answer:

The Earth is composed of four main layers:

- Inner Core: Solid, primarily iron and nickel; about 1,220 km thick; responsible for Earth's magnetic field.
- Outer Core: Liquid, also mainly iron and nickel; approximately 2,200 km thick; generates Earth's magnetic field through convection.
- Mantle: Semi-solid, composed of silicate rocks rich in magnesium and iron; extends to about 2,900 km below the surface; involved in mantle convection and plate movements.
