Sample Questions and Answer Key for Consumer Math Unit 10

Question 1: Calculating Simple Interest

Problem: If you deposit \$2,000 into a savings account with an annual simple interest rate of 3%, how much interest will you earn after 4 years?

Solution:

- Identify the variables:
 - Principal (P) = \$2000
 - Rate (r) = 3% = 0.03
 - Time (t) = 4 years
- Use the simple interest formula:

$$I = P \times r \times t$$

- Calculate:

$$I = 2000 \times 0.03 \times 4 = \$240$$

Answer: You will earn \$240 in interest after 4 years.

Question 2: Loan Payment Calculation

Problem: A person takes out a loan of \$10,000 at an annual interest rate of 6%, to be paid over 5 years with monthly payments. What is the monthly payment? (Use the loan amortization formula)

Solution:

- Identify variables:

- Principal (P) = \$10,000
- Annual interest rate (r) = 6% = 0.06
- Number of years (n) = 5
- Number of payments (N) = 5 × 12 = 60
- Monthly interest rate (i) = 0.06 / 12 = 0.005

- Use the loan amortization formula:

$$\text{Payment} = P \times [i / (1 - (1 + i)^{-N})]$$

- Calculate:

- $(1 + i)^{-N} = (1 + 0.005)^{-60} \approx 0.7401$
- Denominator: $1 - 0.7401 = 0.2599$
- Payment = $10,000 \times (0.005 / 0.2599) \approx 10,000 \times 0.01923 \approx \192.30

Answer: The monthly payment is approximately \$192.30.

Question 3: Credit Card Interest Calculation

Problem: You have a credit card balance of \$1,200 with an annual interest rate of 18%. If you only make the minimum payment of \$36 each month, how long will it take to pay off the balance assuming no new charges are made?

Solution:

This problem involves understanding how credit card interest accrues and the impact of minimum payments. While exact calculation requires iterative or financial calculator use, an approximate estimate can be made:

- Identify variables:
 - Balance = \$1,200
 - Monthly interest rate = $18\% / 12 = 1.5\% = 0.015$
 - Minimum payment = \$36
- Estimate the time to pay off:
 - Since the payments are close to the interest accrued monthly, the balance decreases slowly.
 - Using approximate formulas or financial calculator, it would take around 50-55 months to pay off the debt under these conditions.

Answer: It will take approximately 50 to 55 months to pay off the credit card balance making only the minimum payments.
