Difficulty level:

This section demanded a higher level of analytical thinking, with multi-step reasoning and careful algebraic manipulation. Partial credit was often awarded for correct intermediate steps, emphasizing the importance of methodical working.

Section C: Extended Problem / Investigation

The final question was designed as an extended problem, integrating several concepts into a single, comprehensive task.

Features of Question 13:

- Open-ended, requiring students to formulate, model, and analyze a real-world situation
- Use of differential equations or advanced algebra
- Critical evaluation of findings and presentation of conclusions

Sample scenario:

A company's revenue model based on pricing strategies, requiring students to develop functions, differentiate to find maximum profit, and consider constraints.

Difficulty level:

This question was the most demanding, emphasizing not just procedural knowledge but strategic planning, mathematical modelling, and interpretation of results.
