Key milestones:

- Adoption of EDIFACT standards for global interoperability.
- Integration with other IATA messaging formats such as AWB (Air Waybill) and House Manifest messages.
- Continuous updates to accommodate evolving supply chain requirements, including e-freight initiatives.

Structure and Components of the SCM Message Format

The SCM message is composed of multiple segments, each containing specific data elements that convey detailed information about shipments. The structure adheres to EDIFACT syntax rules, making it both machine-readable and standardized.

Core Segments and Data Elements

- UNH (Message Header):

Marks the beginning of the message, including message type and version.

- BGM (Beginning of Message):

Defines the message function, such as shipment status, booking, or update.

- DTM (Date/Time/Period):

Indicates relevant dates like shipment date, estimated time of arrival (ETA), or pickup date.

- NAD (Name and Address):

Provides details about involved parties?shipper, consignee, carrier, and agents.

- GID (Goods Item Details):

Describes the cargo items, including descriptions, quantities, and weights.

- TDT (Transport Details):

Specifies transportation specifics such as mode, carrier, and routing.

- LOC (Place/Location):

Provides locations involved in the shipment, including airports, warehouses, or customs points.

- MEA (Measurements):

Details measurements like weight, volume, and dimensions.
